

AMENDMENT TO THE CLAIMS:

Please amend claims 3-5, as shown below.

This listing of claims will replace all prior versions and listings of claims in the Application:

Claim 1 (original): A power storage device comprising a nitroxyl polymer which has a nitroxyl cation partial structure represented by the following chemical formula (I) in oxidation state and has a nitroxyl radical partial structure represented by the following chemical formula (II) in reduction state, in a cathode; employing a reaction for transferring an electron between the two states represented by the following equation (B) as an electrode reaction of the cathode; and using a lithium or lithium alloy anode as an anode active material; wherein the cathode is in direct contact with the anode.

Claim 2 (original): The power storage device according to claim 1, wherein a lithium-tin alloy or a lithium-silicon alloy is used as the anode active material.

Claim 3 (currently amended): The power storage device according to claim 1 [[or 2]], using a cathode collector having a conductive auxiliary layer comprising carbon as a main component formed and integrated on an aluminum electrode as a cathode collector.

Claim 4 (currently amended): The power storage device according to claim 1 [[or 2]], using a carbon paper as a cathode collector.

Claim 5 (currently amended): The power storage device according to ~~any one of claims 1 to 4~~claim 1, wherein the nitroxyl polymer is a polymer compound having a cyclic nitroxyl structure represented by the following chemical formula (5) in oxidation state:

wherein each of R₁ to R₄ independently represents an alkyl group, and X represents a divalent group so that the chemical formula (5) forms a 5- to 7-membered ring, while X constitutes a part of a side chain or a main chain of the polymer.

Claim 6 (original): The power storage device according to claim 5, wherein the nitroxyl polymer is a polymer compound having a side chain containing a residue which removes at least one hydrogen atom bonded to an element forming at least one cyclic nitroxyl structure selected from the group consisting of a 2,2,6,6-tetramethylpiperidinoxyl cation represented by chemical formula (6), a 2,2,5,5-tetramethylpyrrolidinoxyl cation represented by chemical formula (7) and a 2,2,5,5-tetramethylpyrrolinoxyl cation represented by chemical formula (8).
